RE: Written confirmation of ability to provide fire service

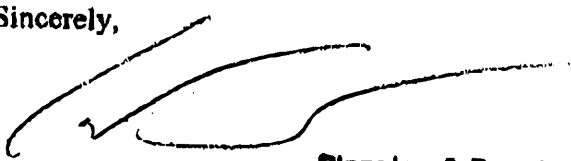

Bob,

I spoke with you approximately one week ago concerning the San Diego Fire Department's ability to provide service to three distinct power generation projects in the Otay Mesa area of the City of San Diego. You and your staff were extremely helpful in securing information relative to nearest stations to respond to the proposed sites, response times, resources, and most importantly the determination that the City of San Diego has the ability to serve those sites in the event of a fire emergency. This information was conveyed verbally in a conversation we had on February 23, 2001.

There has since been a new option added to the project description. Instead of three distinct facilities on three sites, the other option is to only construct two facilities adjacent to each other. In short, we have located the sites all in one place and have reduced the turbines proposed from three to two. These facilities would be constructed upon the proposed Larkspur site. I have included the project description of this alternative proposed facility as Attachment "A" and a map of the location as Attachment "B". Please note - I already have the response times and nearest station information, as the new proposed site is one of the original sites we discussed.

On behalf of our client, I am writing to obtain a written confirmation for the California Energy Commission that the City of San Diego Fire Department has the ability to serve the Larkspur Site. The attached Attachment "C" will serve as documentation for the California Energy Commission's 21 day Siting Process. Should you have any questions please contact me at (714) 648-2881.

Sincerely,

Ian Forrest
